 **RT60 web app**

Those interested in this thread may also be interested in an RT60 calculator web app that I put online last week. The calculator is intended to be a powerful and elegant tool that is a departure from the common spreadsheet. Suitable for rooms with a diffuse field, you can calculate Sabine, Eyring, Fitzroy, and Arau-Pruchades equations simultaneously. Database has about 400 combinations of materials and mounting types. A unique feature is dynamic ranging between different levels of occupancy in audience areas (best in Chrome and Safari). Register to save and export as CSV.

More features to this calculator and other tools are in various states of development. Check back regularly for new stuff.
